

## General Operating Safety

- Do not handle either the plug or the steamer with wet hands
- Do not handle, pull or carry the steamer by the hose or power cable. Never tug the cable
- Do not let the cable touch hot surfaces. Let the steamer cool before putting away
- Always disconnect from the mains socket when not in use
- Keep the steamer and all equipment away from children
- Do not leave the steamer unattended while switched on
- This steamer is designed for pressing fabrics and removing creases. It should never be used for any other purposes
- Do not operate the steamer if any part of it is damaged in any way
- Do not dismantle or attempt to repair the steamer yourself
- For diagnosis or repairs, always take this appliance to a professional person
- Incorrect reassembly or repair could cause a risk of fire, electric shock or injury to users
- Do not immerse the steamer in water or other liquids

### K9 Express - 1 Year Guarantee

Your K9 Express steamer is guaranteed against defects in material or workmanship for 1 year commencing on the date of purchase. Under normal use, if any part proves to be defective, the equipment will be exchanged free of charge within 3 months from the date of purchase. This guarantee does not apply to any unit, which has been subject to misuse, negligence, accident or natural calamities or without proof of purchase. Failure of the steamer due to build up of lime scale is not covered. You must take the necessary steps to protect your steamer from harmful hard water problems. Cables are excluded from the guarantee.

### Dealing with Hard Water

Before using your steamer, use the Hard Water Test Strip supplied and enter your test result below

PPM

- Serial Number:
- Rated Voltage: 230v 50Hz AC only
- Wattage: 1400w
- Weight (net): 7.5 kg
- Size: 39 x 22.5 x 49cm (H)
- Water Capacity: 3.5 Litres

For Service and Repair, telephone 01279 453 333 or return the steamer to:  
Morplan Ltd, PO Box 54, Harlow, Essex, CM20 2TS

# K9 Express - User Instructions

Congratulations on your purchase of a K9 Express Steamer

## K9 is our most compact steamer yet but this is no puppy!

It delivers the same bite as its big brother, the Vitesse, (using identical key components) but at a budget price and with a little less sophistication as the controls are much simpler to use. **K9 is hot stuff!** Its powerful 1400-watt heating element takes only 1 minute to produce steam and can work for over 2 hours without any attention from the doctor!

**And with K9 there is no doubt who is the boss** - it follows your every move on its easy glide castors and you always know if it needs more water with the clear valve-operated water bottle. It also features an automatic cut-out if the water runs out. K9's tough, aluminium body is resistant to knocks yet weighs only 7.5kgs (16½lbs). Features a 1.7m (5ft 6ins) long cable with fitted plug.

## Important

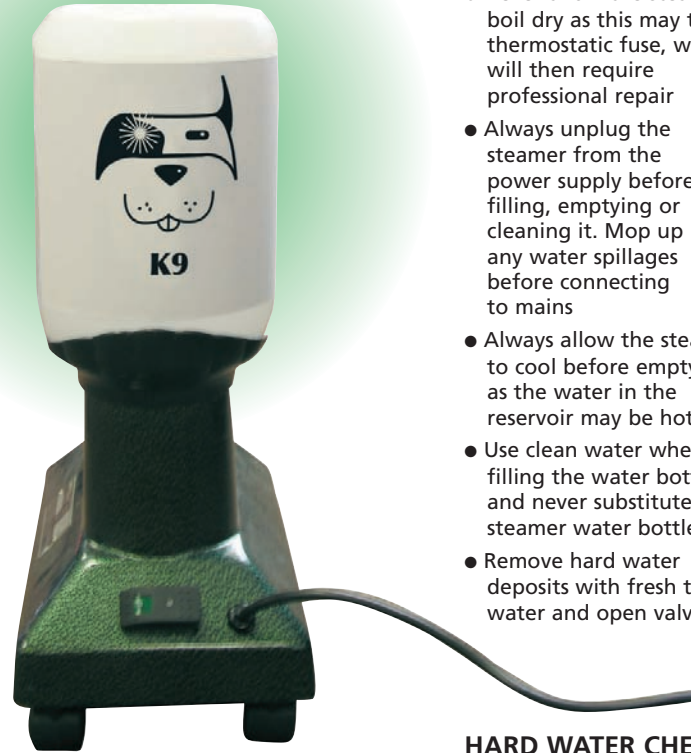

- K9 just can't wait to lick your garments into shape but please read all instructions in this manual before using and installing your steamer
- Use K9 only as described in this manual - Morplan cannot take responsibility for any accidents or injuries caused by not following this manual correctly

## Assembling your K9 steamer

- Screw together the 3 section support pole and then screw this into the top of the steamer
- Rest the steam head in its cradle at the top of the support pole
- Rotate the locking collar on the steam outlet fully clockwise (the outlet is below the power switch on top of the machine). Push the steam hose in place and twist the locking collar anti-clockwise to lock it into position
- If you would like your K9 Steamer to sport a cheeky face (as shown right) take the adhesive label supplied and apply it to your water bottle before use
- Fill the water bottle with fresh tap water and place it on top of the steamer with the valve facing downwards
- Plug into the mains supply (ensuring you have the correct corresponding voltage) and turn the steamer switch to the ON position. You will have steam within 1 minute

## When steaming:

- To reduce the risk of contact with hot water emitting from the steam vents, check the steamer before each use by holding the steam head away from your body and operating it
- Touch material lightly with the steam head and creases will come out instantly
- Creases are forced out of fabric more easily by steaming in a downward motion
- Always keep the steam head upright - this allows any condensed water to return to the boiler and helps prevent any spitting or water discharge
- If you are steaming in a low position near the floor, straighten the hose upwards and outwards frequently to keep it clear of condensation

# User Safety

- Use caution, as burns could occur from touching hot parts, hot water or steam
- Always steam away from the body and keep your free hand clear
- Do not steam onto your hand without a glove or pressing mitten
- Never point the steam head at other people
- If the steam head is kinked or is gurgling, straighten the hose to let any water flow back to the boiler
- Never allow the steamer to boil dry as this may trip the thermostatic fuse, which will then require professional repair
- Always unplug the steamer from the power supply before filling, emptying or cleaning it. Mop up any water spillages before connecting to mains
- Always allow the steamer to cool before emptying as the water in the reservoir may be hot
- Use clean water when filling the water bottle and never substitute the steamer water bottle
- Remove hard water deposits with fresh tap water and open valves

## HARD WATER CHECK

No two water supplies have the same mineral content. If the steamer begins to cut on and off during normal use, the thermostat is indicating that the heating unit needs the sediment cleaned out.

We recommend that you read our FREE Hard Water Datasheet - call our Marketing team on **Freefone 0800 435 333** for a copy
